

Field Calibration without Wires

Field programming without Wires

“Flash” New Programs

Doubles as a MCG 2150 and laptop

Reduced Start-Up Time

Local LCD Display

Lightweight, Easy to Handle

Intrinsically Safe Unit Available

The L&J Engineering MCG 2151 SFI Programmer

MCG 2151 SFI Programmer

With the MCG 2151 Handheld SFI Programmer, setup, programming, and calibration become a matter of “remote control.” When used with any of the MCG Series “Smart Flash” gauges (with Infrared Pickup), this compact wireless unit allows the operator to access, view, and change programming data without ever removing the explosion proof housing. It is simply a matter of standing within (5) feet of the readout and pressing the entry keypad. This battery powered unit requires no physical coupling to the gauge. Download new programs using the supplied interface cable. Microsoft ActiveSync is included to transfer files over to your MCG 2151 from your Windows 9x/NT/2000/XP PC. Using Microsoft ActiveSync allows the copying and pasting of ROM images from Windows Explorer. An intrinsically safe MCG 2151 is also available. For use in hazardous environments, the intrinsically safe MCG 2151 can read and monitor tank inventory and levels at a tank farm. Remote field engineers can retain and analyze vital process data at the point of activity.

MCG 2151 - SFI PROGRAMMER

The MCG 2151 and 2151-I SFI Programmer unit communicates with the following:

- MCG 1200SFI - Field Transmitter
- MCG 1350SFI - Ground Level Display
- MCG 1500SFI - Servo Gauge
- MCG 1600SFI - Radar Level Gauge
- MCG 1700SFI - Radar Level Gauge
- MCG 1800 - Process Radar Gauge
- MCG 2000SFI - Transmitter
- MCG 2000MAX - Transmitter
